Read the passage, and choose the correct answer A, B, C or D for each question.

Ha Long Bay is a group of offshore islands that is the best example of marine invaded limestone region in the world. The Bay holds over 1,600 islands and islets. There are caves and grottoes, with stalactites and stalagmites. Its limestone pillars are a unique natural feature of great scenic beauty and biological interest. The great extent and the richness of its forms sets it apart from many other sites.

Ha Long Bay is an extremely popular destination both for foreigners and Vietnamese: already in the early 1990s it saw over 1 million visitors a year. It is unlikely that the number has decreased over the years - so there will always be about 3,000 other people in the Bay at the same time as you!

The natural beauty of the Bay lay hidden today under a very common fog. As I had already seen the similar *karst* landscape in China a couple of years before, I certainly said that I was blown away by the beauty of Ha Long Bay. We went onto one of the islands to visit the Surprising Cave - an indeed surprisingly big and beautiful cave with three hollow chambers. We saw some monkeys here too, just outside the cave exit.

Part of the tour was half an hour of kayaking - enough to paddle a full circle around the main area. The views from the kayak I found much more impressive than from the larger boat: you're so tiny then and the peaks rise sharply in front of you. I had a better look at the water too, and cannot say that I saw pollution by plastic or other junk floating around. There is a thin layer of oil on the water in some parts though. And then it's time to get back in the bus to Ha Noi, another 3.5 hours. The tour was carried out well with good seafood for lunch and I had a satisfying day.

Question 29. The attraction that Ha Long Bay offer to tourists is _____.

- A. the largest limestone region in the world
 B. its caves and grottoes, with stalactites and stalagmites
 C. its unique value of landscape and biology
 D. a large number of islands and islets

Question 30. During half an hour of kayaking, the writer found that _____.

- A. he was more impressed by the view from the kayak than by that from the boat
 B. he could see the peaks rise sharply in front of him
 C. the problem of pollution there was serious with plastic or other junk floating around
 D. he could see a thin layer of oil on the water in a full circle around the main area

Question 31. The writer was _____.

- A. very impressed by the beauty of Ha Long Bay B. really frightened of visiting the Surprising Cave
 C. able to escape from an explosion in Ha Long Bay D. unable to see Ha Long Bay due to the fog

Question 32. The word "its" in the first paragraph refers to _____.

- A. cave B. grotto C. island D. Ha Long Bay

Question 33. The word "karst" in paragraph 3 is closest in meaning to _____.

- A. the explosive that can blow tourists away if they are not careful
B. the common landscape found in China suitable for kayaking and boating
C. an irregular limestone region with underground streams, and caves
D. a large number of islands and islets in Viet Nam and China

Read the following passage and mark the letter A, B, C, or D to indicate the correct answer to each of the questions.

The costs and benefits of global warming will vary greatly from area to area. For moderate climate change, the balance can be difficult to assess. But the larger the change in climate, the more negative the consequences will become. Global warming will probably make life harder, not easier, for most people. This is mainly because we have already built enormous infrastructure based on the climate we now have.

People in some temperate zones may benefit from milder winters, more abundant rainfall, and expanding crop production zones. But people in other areas will suffer from increased heat waves, Coastal erosion, rising sea level, more erratic rainfall, and droughts.

The crops, natural vegetation, and domesticated and wild animals (including seafood) that sustain people in a given area may be unable to adapt to local or regional changes in climate. The ranges of diseases and insect pests that are limited by temperature may expand, if other environmental conditions are also favorable.

In its summary report on the impacts of climate change, the Intergovernmental Panel on Climate Change stated, "Taken as a whole, the range of published evidence indicates that the net damage costs of climate change are likely to be significant and to increase over time."
